TITLE: Heteropoly acids supported on polyoxometallate salts and their preparation

BSPL:

where G is Cu.sup.++ or Fe.sup.+++ or an oxy ion of Ti, V, Cr, U, As, Bi, Sb, Nb or La, or is absent; X is a Group IIIB, IVB, VB, VIB or transition element,

such as phosphorus, silicon, gallium, aluminum, arsenic, germanium, boron,

cobalt, cerium, praseodymium, uranium and thorium; M is molybdenum or tungsten,

or combinations thereof; M' is vanadium; M'' is independently zinc or a transition metal different from M and M', such as titanium, zirconium, hafnium,

vanadium, niobium, tantalum, chromium, molybdenum, tungsten, manganese,

rhodium, iron, cobalt, nickel, ruthenium, rhodium, palladium, osmium, iridium,

platinum, copper, zinc or combination thereof, z' is the charge on said cation G; k' is 1 to 5, m' is 5 to 17, x' is 0 to 3, n is 0 to 3; y' is 18 to 60; when M is molybdenum, x' is 0 to 3; when M is tungsten, x' is 0 to 6; and e' is the charge of the anion of the polyoxometallate. When M is a combination of molybdenum and tungsten, x' is preferably 0. The support component comprises

an insoluble polyoxometallate salt having the formula:
